

INCOLOY 801, ALLOY 801, UNS N08801

Introduction :

Incoloy 801 [UNS Designation N08801], also known as "Alloy 801". It is very similar to Incoloy 800. It has iron-nickel-chromium alloys. Incoloy 801 has exceptional resistance to polythionic acid cracking and has increased titanium additions raising the tensile and rupture strength dramatically. Incoloy 802 has high carbon level and it is been used extensively in sinter deck plate applications for handling abrasive. Hence offers competitive high-temperature strength capabilities high-temperature environments. 801 Incoloy is widely used for production of energy conversion devices, such as aerospace craft, rocket motor, nuclear reactor, petrochemical equipments, coaly transforming, and also for producing high temperature components for gas turbine in the field of aviation, naval vessels and industry, such as turbine blade, guide blade, turbine disc, high pressure compressor disc, combustor and so on.
